

Mouse Tape installation instructions.

The tan stuff is the Mouse Tape & the yellow stuff is the removable backing.

Some customers have cleaned the areas where the Mouse Tape will be applied with alcohol.

Using a pin, the edge of a scissors or other sharp object, gently separate the backing from the tape, exposing the sticky surface. This can be a little tricky because the Mouse Tape is very thin and really likes to stick.

Remove enough backing to expose the amount of tape you will need to cover the pads on your mouse. You need to peel off the backing before cutting.

Cutting one piece at a time, cut the tape and apply it to your mouse.

Put any remaining tape in a safe place.

Enjoy the feel of your “new” mouse.
